

Endometrial cancer (EC)

Definition

Endometrial cancer include epithelial malignant tumors, (endometrioid, mucinous, serous, clear cell, mixed, and undifferentiated cancer) and malignant mixed epithelial and mesenchymal tumor, i.e. carcinosarcoma (malignant mixed Müllerian tumor).

Macroscopic appearance

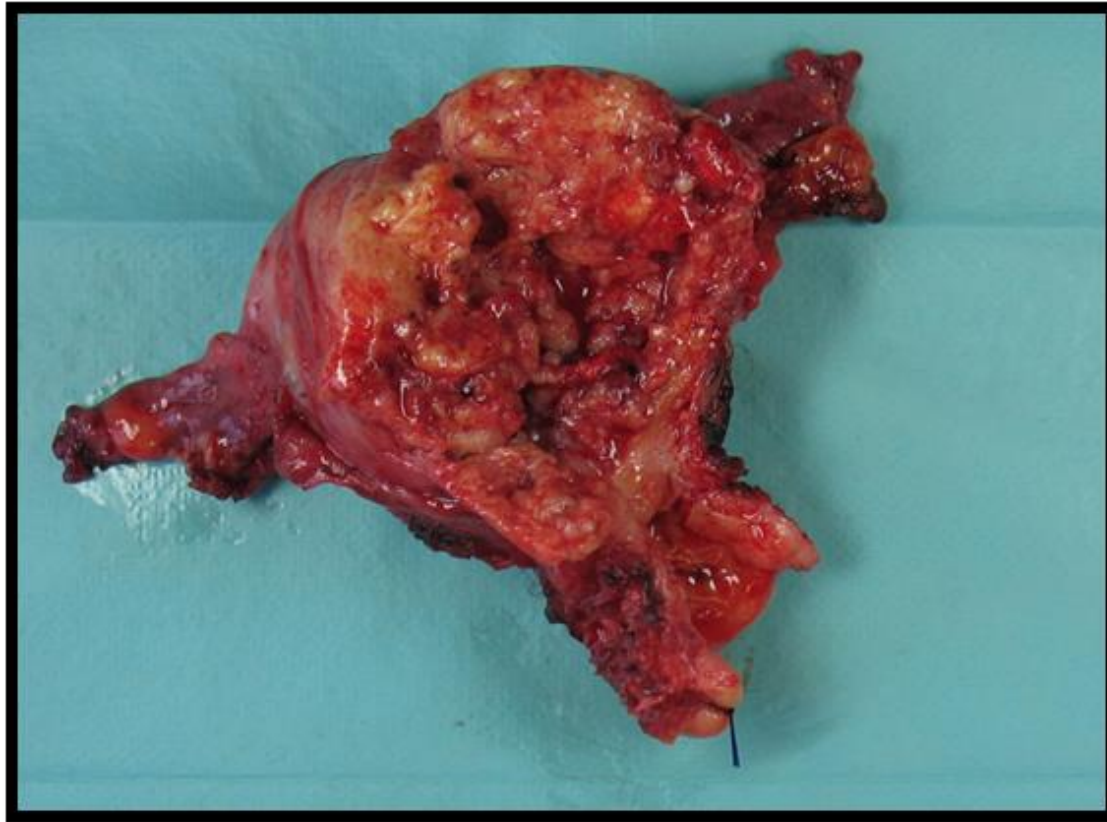

Figure 1a. Macroscopic appearance of a tumour originating in the endometrium of the corpus uteri, infiltrating into the myometrium

Macroscopic appearance

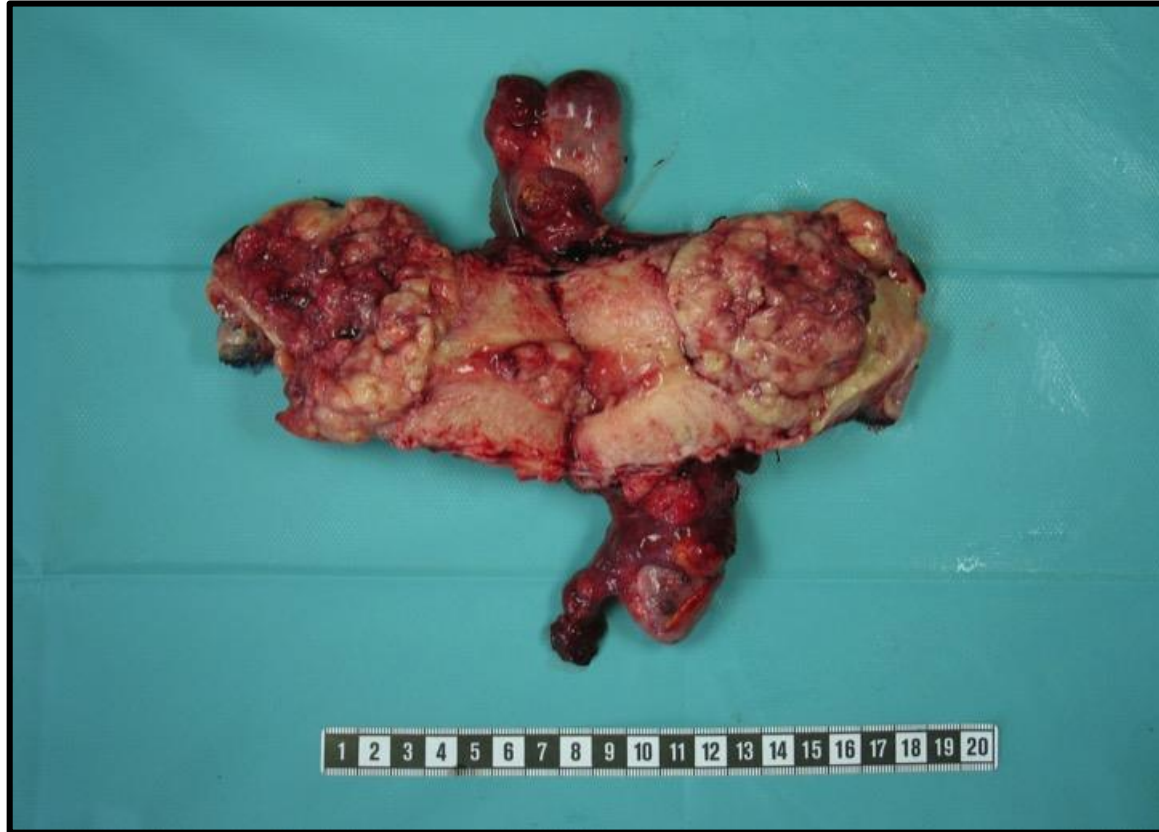

Figure 1b. Macroscopic appearance of endometrial cancer that originates in the lower uterine segment.

Microscopic appearance of endometrioid cancers

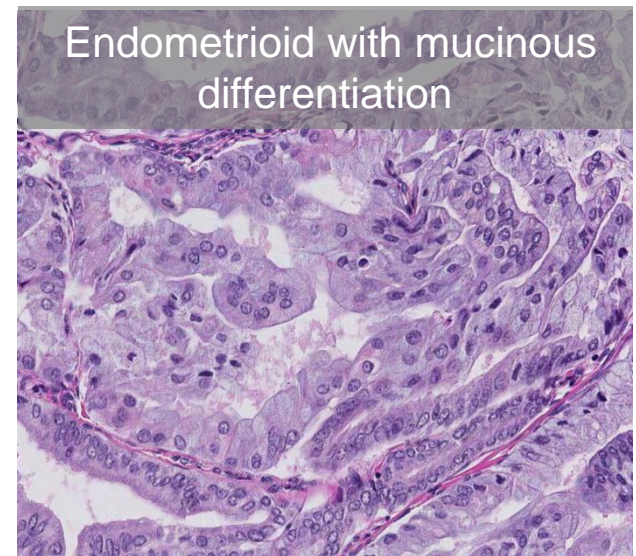

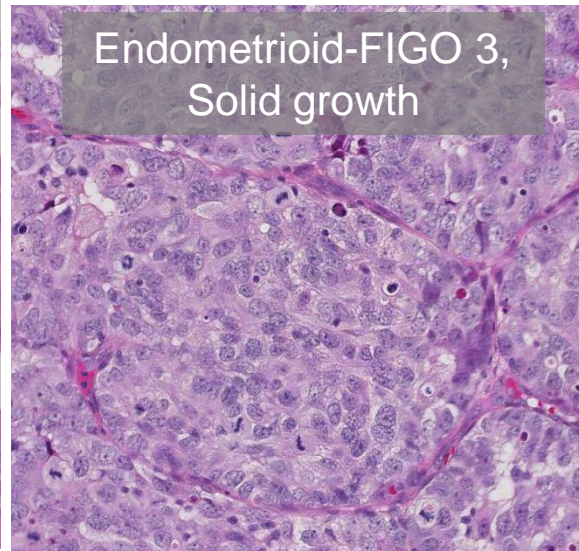

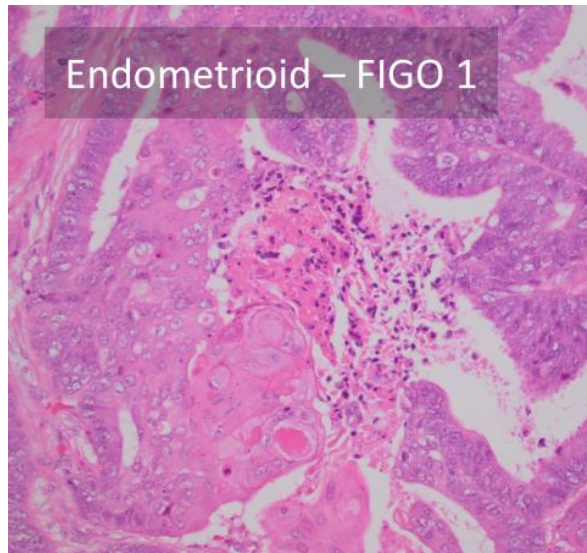

Figure 2 a-c

Microscopic appearance of the MELF (Microcystic, Elongated structures or Fragmented solid cells) - growth pattern

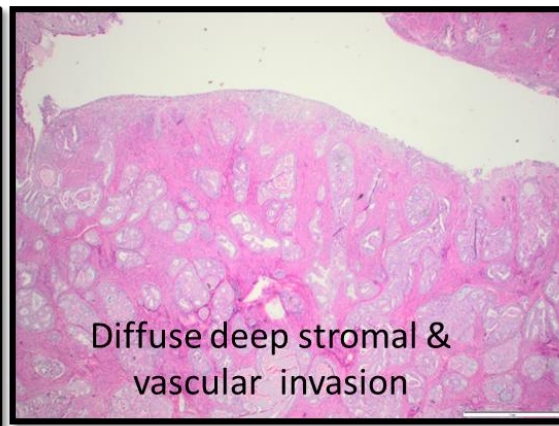

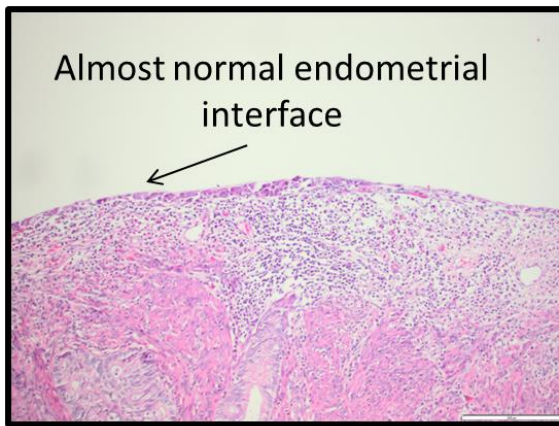

Figure 3: MELF growth pattern, associated with adverse prognosis

Microscopic appearance— Non-endometrioid tumours

Assessment of endometrial vascularity according to IETA (Leone et al UOG 2010)

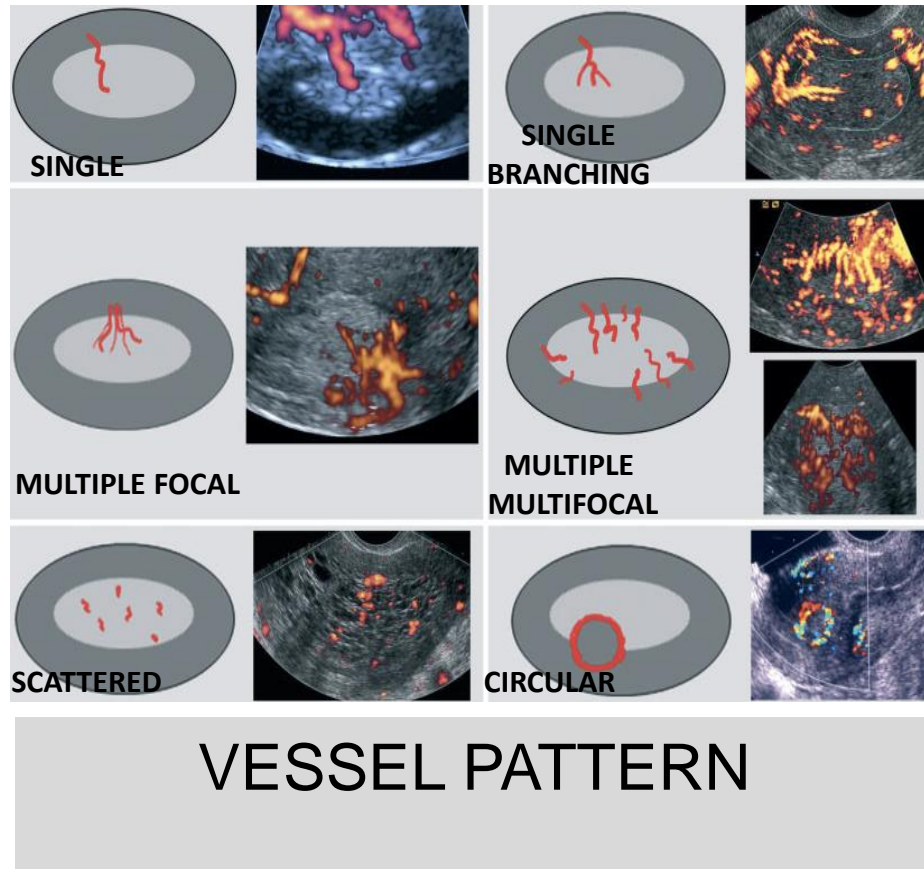

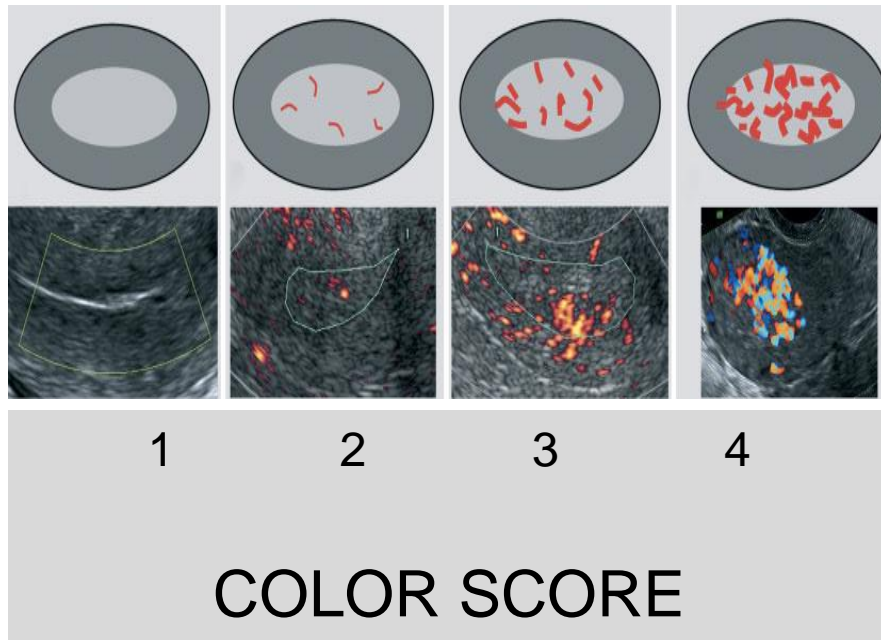

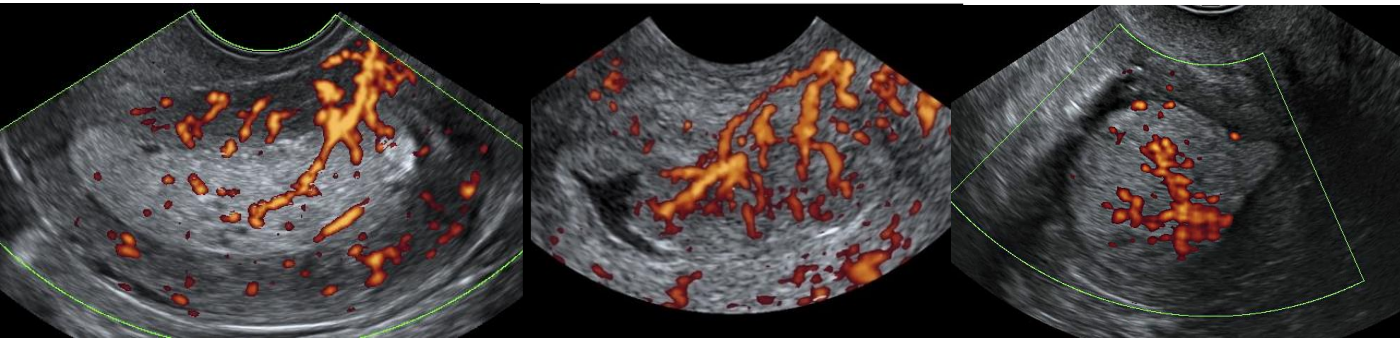

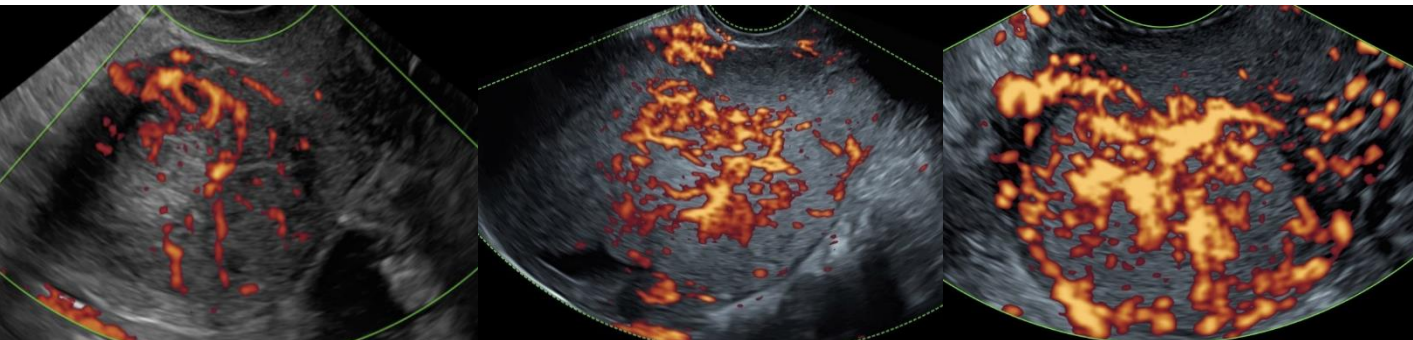

Figure 5b

Sonographic vessel pattern may reflect tumour growth pattern (Epstein et al UOG 2011)

Focal vessel-pattern associated with exophytic growth

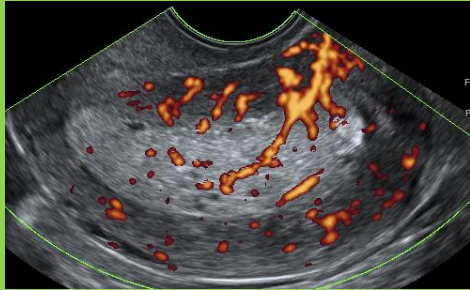

Multiple multifocal vessel pattern associated with invasive growth

Figure 6

Morphology of endometrioid endometrial cancer (EEC) depends on grade and stage

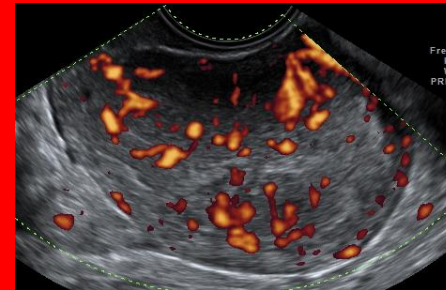

(Epstein et al UOG 2018)

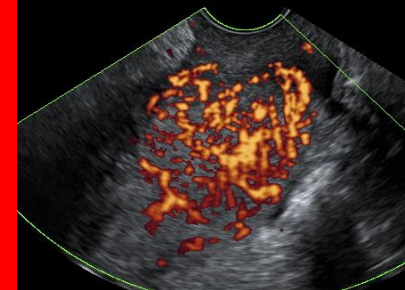

Stage 1A, grade 1

Stage 1A, grade 3

Stage 1B, grade 1

Stage II, grade 3

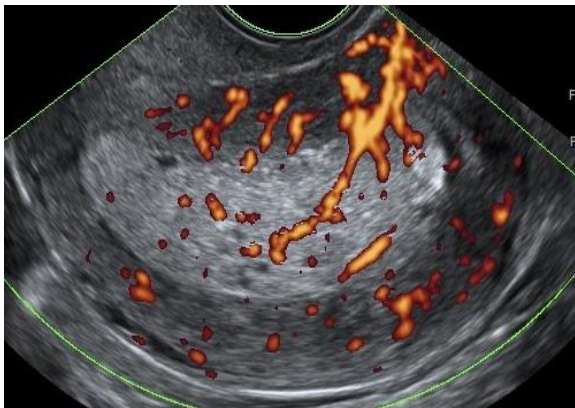

Low risk tumors

High risk tumors

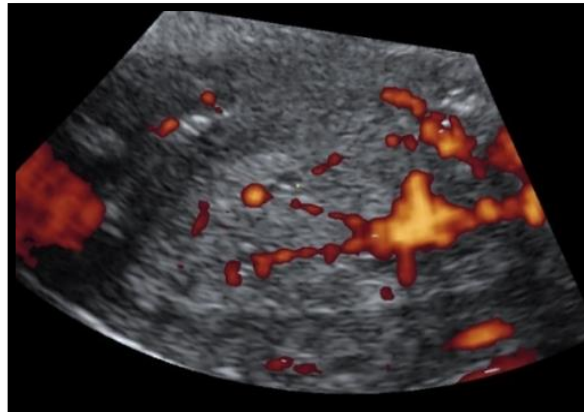

Figure 7

Ultrasound characteristics

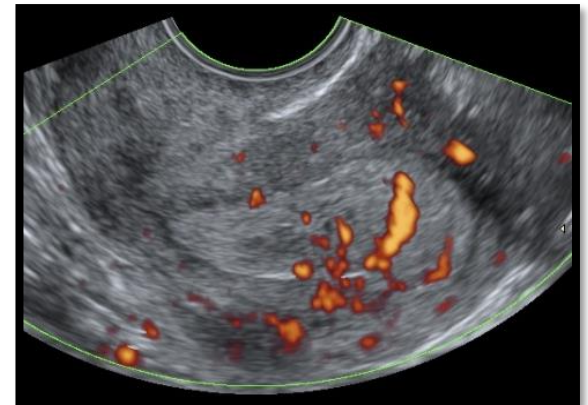

LOW RISK CANCER

Regular endometrial-
myometrial junction
Uniform Echogenicity

Single branching, or
Multiple focal vessels

Sparse vascularization

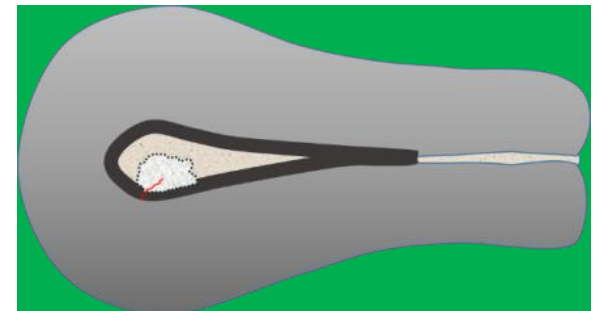

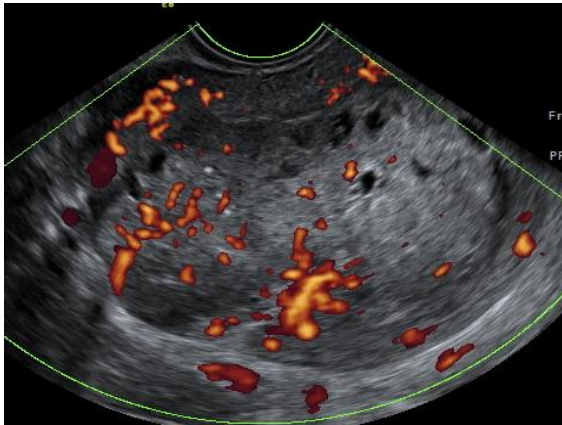

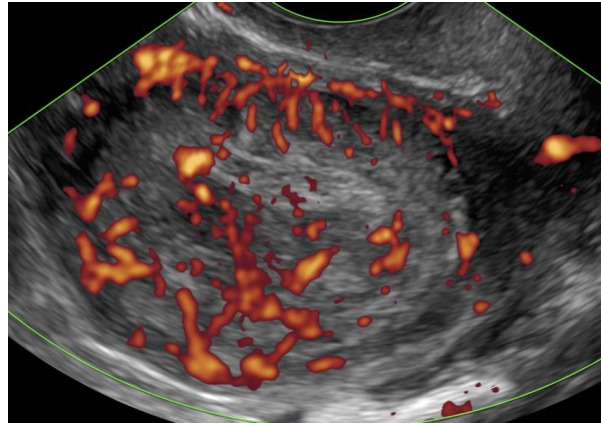

Figure 8

Ultrasound characteristics

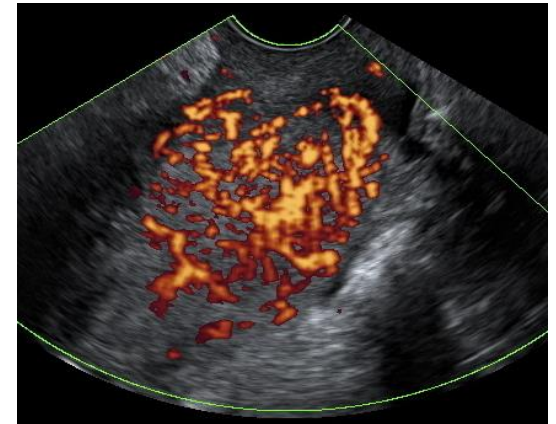

HIGH RISK CANCER

Irregular endometrial-
myometrial junction
Non-uniform echogenicity

Multiple, multifocal
vessel pattern

Color score 3-4

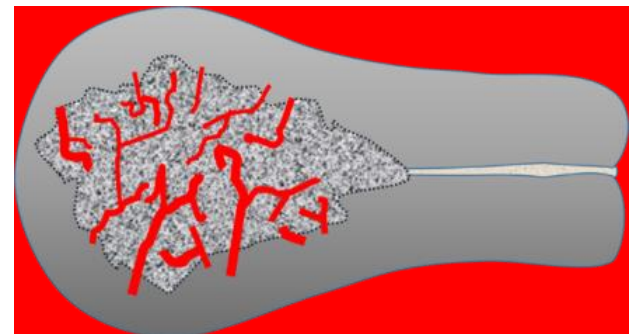

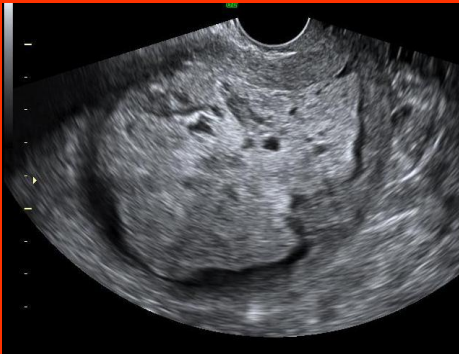

Figure 9

Endometrial Morphology – non-endometrioid tumours

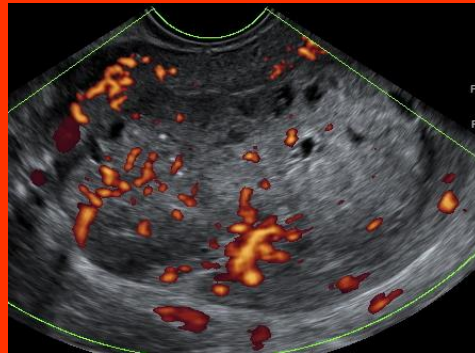

(Epstein et al UOG 2018)

Non-endometrioid tumours are all high-risk tumours

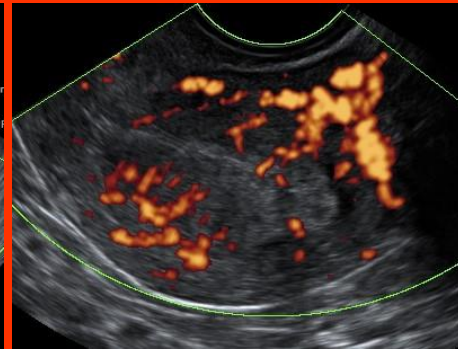

Clear cell

Carcinosarcoma

Serous

Mixed

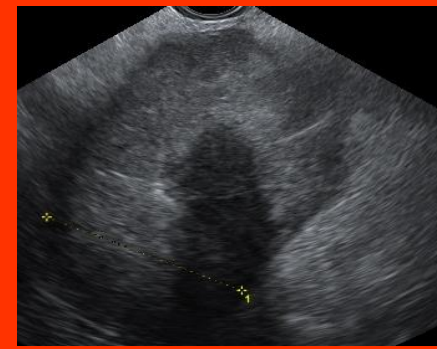

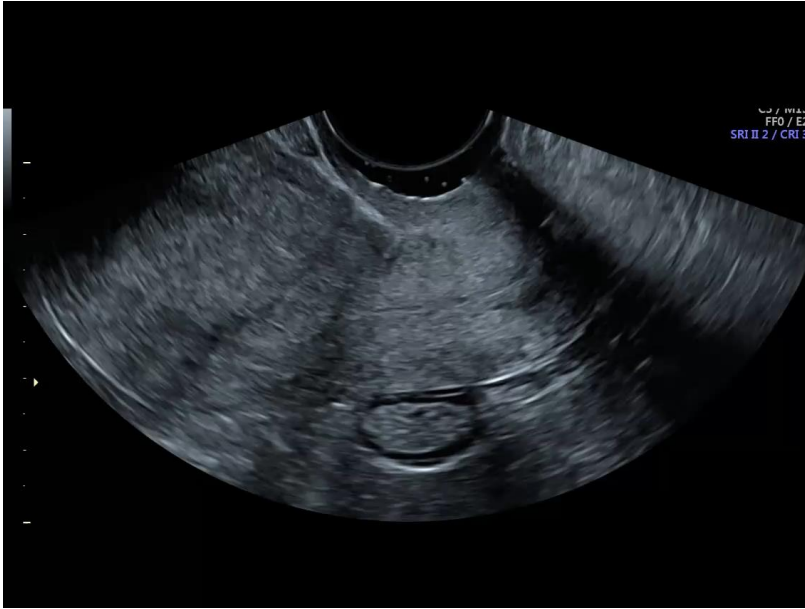

Figure 10

VIDEO – typical case low risk endometrial cancer

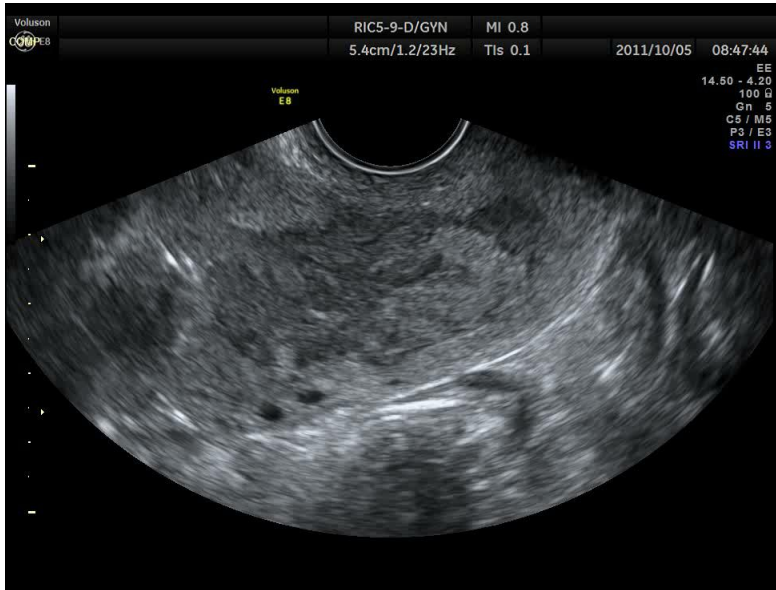

No cervical stromal invasion

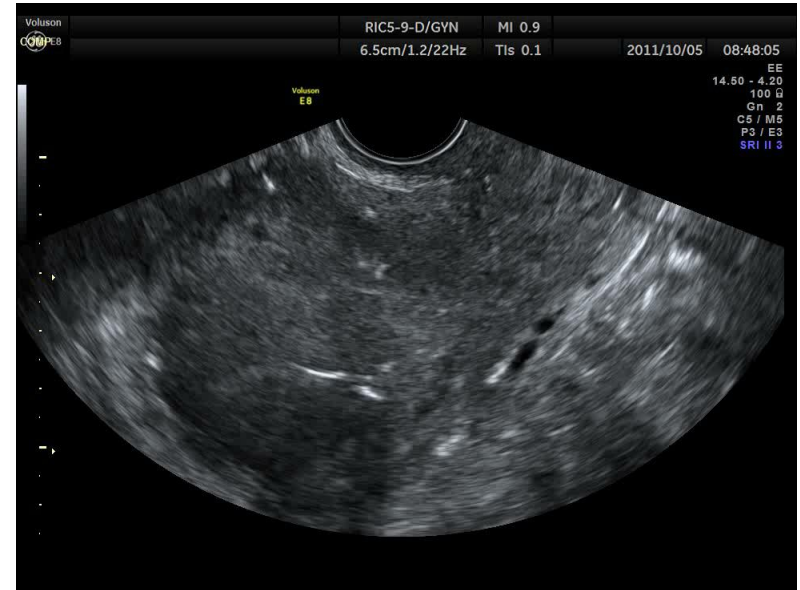

Myometrial invasion < 50%

Figure 11

VIDEO – Typical case high risk endometrial cancer

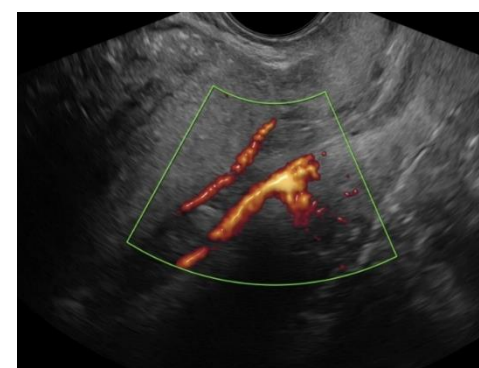

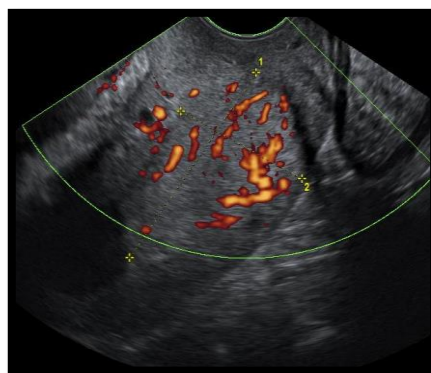

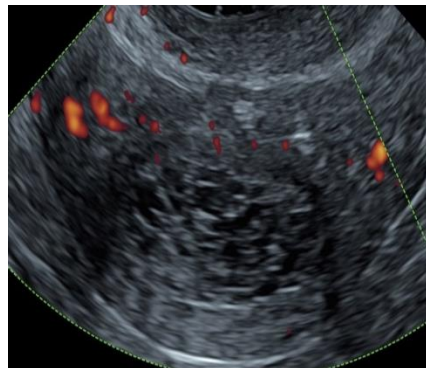

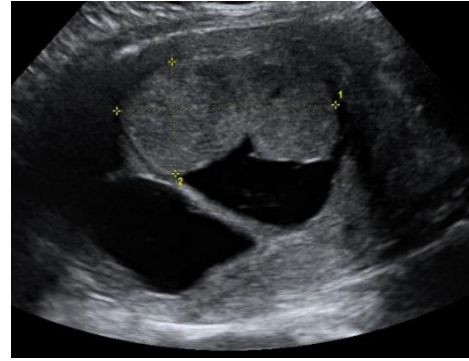

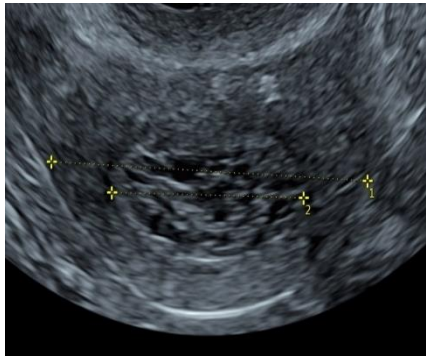

Cervical stromal invasion present

Myometrial invasion present
