

Role of ultrasound in diagnosing gynecological emergencies and pathologies in pregnancy: from imaging to clinical decision-making

Chaired by A/Prof. Simone Ferrero (Italy) and A/Prof. Ligita Jokubkiene (Sweden)

Wednesday 30th September 2026

BST (UTC +1)	Mins	Lecture	Faculty
12:00	5	Welcome and introduction	A/Prof. Simone Ferrero (Italy) and A/Prof. Ligita Jokubkiene (Sweden)
12:05	20	Fibroids in pregnancy: how ultrasound guides surgical planning in complex caesarean delivery	Dr Rozi Aditya Aryananda (Indonesia)
12:25	20	Endometriosis in pregnancy: ultrasound features and pregnancy-related complications	A/Prof. Ligita Jokubkiene (Sweden)
12:45	20	Benign adnexal masses in pregnancy: what to watch, when to wait, when to operate	Dr Nina Cooper (UK)
13:05	20	Gynecological malignancies during pregnancy: the role of ultrasound in multidisciplinary care	A/Prof. Simone Ferrero (Italy)
13:25	30	Live Q&A and panel discussion	All faculty
13:55	5	Feedback and close	A/Prof. Simone Ferrero (Italy) and A/Prof. Ligita Jokubkiene (Sweden)

Learning objectives

A/Prof. Simone Ferrero (Italy)

COURSES SUB-COMMITTEE MEMBER

A/Prof. Ligita Jokubkiene (Sweden)

COURSES SUB-COMMITTEE CHAIR

Dr Rozi Aditya Aryananda (Indonesia)

OBSTETRICIAN AND GYNAECOLOGIST, DR. SOETOMO GENERAL ACADEMIC HOSPITAL, AND FACULTY, DEPARTMENT OF OBSTETRICS & GYNCOLOGY, UNIVERSITAS AIRLANGGA (UNAIR), SURABAYA, INDONESIA

Dr Nina Cooper (UK)

DIGITAL LEARNING SUB-COMMITTEE MEMBER

1. Recognise the ultrasound features and pregnancy-related complications associated with common gynaecological conditions, including fibroids, endometriosis and adnexal masses.

2. Evaluate the role of ultrasound in the assessment and management of gynaecological conditions during pregnancy, supporting evidence-based clinical decision-making.

3. Discuss the role of ultrasound in the multidisciplinary management of gynaecological malignancies diagnosed during pregnancy, including its contribution to diagnosis, monitoring and treatment planning.

4. Apply current best practice in the ultrasound assessment of complex gynaecological conditions during pregnancy to optimise maternal and fetal outcomes.
