Time	Mins	Item	Speaker
12:00	5	Welcome and Introduction	Dr Srdjan Saso
12:05	10	Advancements in ultrasound technology integrated with AI Learning objectives: • Current status of AI applications: How has AI been applied to Ob/Gyn so far? • Future directions: What will be possible with real-time AI and 3D AI? • Insights for young practitioners in Ob/Gyn on understanding AI breakthroughs from a particular perspective.	Dr. Yeji Lee
12:15	15	Generative Artificial Intelligence (GAI): The good, the bad and the potential Learning objectives: • Explore some of the concepts of Generative AI (GAI) • Develop insight into the multifaceted applications of Generative AI, spanning education, research, clinical practice, and physician well-being. • Analyze both the potential advantages and inherent challenges of integrating Generative AI in medical practice.	Dr Martin R. Chavez
12:30		**Refreshment Break**	
12:45	15	An introduction to AI in Gynaecology	Prof. Tom Bourne
13:00	15	How can AI assist your fetal scanning? Learning objectives: • Available AI functions in obstetric ultrasound • The future direction of AI in fetal ultrasound	Prof Ja-Young Kwon
13:15	15	The use of machine learning in adnexal mass classification Learning objectives: • Brief overview of machine learning techniques • Integrating machine learning into the adnexal mass classification pipeline • Potential clinical applications	Dr Jennifer Barcroft
13:30	30	Panel discussion and close	Dr Srdjan Saso
