

### Learning Objectives:

- This course is aimed at the ob/gyn practitioners who receive, evaluate and decide about the planned route of delivery amidst the sometimes challenging clinical and legal pressures.
- The attendees will improve their knowledge about the generation, the anatomy and the clinical fallout of the post-Cesarean delivery niches.
- Become familiar with the “post-Cesarean delivery syndrome” to be able to relate to them and make efforts to diminish their numbers and even prevent them
- Hear more about the present efforts to prevent the formation of post-Cesarean delivery niches as the cause of many disorders such as uterine rupture, cesarean scar pregnancy, intermenstrual bleeding etc.
- Realize that caesarean scar pregnancy is part of the placenta accreta spectrum and it is a precursor of it that could be diagnosed in the first trimester by actively screening for it
- Follow and draw conclusions of the debates concerning the subject of preventing the formation of Cesarean delivery niches and their clinical consequences

Time (EST)	Time (BST)	Item
<b>Session 1</b>		
07:00	12:00	Welcome and Introduction
07:05	12:05	CSP and PAS; <b>Shifting</b> from treatment to prevention (specific topics)
07:35	12:35	The birth of the term 'niche' and its US detection
07:45	12:45	Clinical relevance of Niches
08:00	13:00	The targets of prevention: CSP and PAS
08:15	13:15	Post-Cesarean delivery syndrome
08:30	13:30	TBC
08:45	13:45	Panel discussion – Live Q&A
<b>09:30</b>	<b>14:30</b>	<b>Refreshment Break</b>
<b>Session 2</b>		
10:00	15:00	Have we exhausted trying different incision suture techniques?
10:15	15:15	Endometrium-Free Closure Technique: History and Resurrection
10:40	15:40	Video presentation of EFCT
10:50	15:50	Clinical results of the EMFCT
11:05	16:05	Panel discussion – Live Q&A
<b>11:30</b>	<b>16:30</b>	<b>Refreshment Break</b>
<b>Session 3</b>		
12:00	17:00	Introducing the debate
12:10	17:10	Debate: Treatment
12:30	17:30	Panel discussion – Live Q&A
13:00	18:00	Feedback and close
