Approved courses

Now you can apply for approval. You will be required to submit a proposal for the first time as microbiology provides an overview of recent research into the development of tools and techniques for detecting and quantifying the presence of specific microorganisms. The approved hospital infection control programs present a practical approach, outlining how specific practices can be adapted for use in different healthcare settings. This includes evidence-based guidance on how to implement the most up-to-date infection control practices.

To apply for official ISUOG approval of your approved course, please apply via the approved course platform. You must provide a proposal outline that includes information about the course, the proposed participants, and the expected outcomes. It is important to ensure that your proposed course meets the accreditation standards set by ISUOG.

Remember to check the approved course terms and conditions before applying. These terms and conditions outline the requirements for approval, including the criteria for evaluation and the process for deciding whether an application will be accepted.

If your application is approved, you will receive formal recognition from ISUOG. Further details of upcoming approved courses can be found on our approved course platform. You can also contact the international liaison in education for more information.

Please also note that you must meet the eligibility criteria to be approved. These criteria include demonstrating a commitment to the professional development of healthcare professionals, providing high-quality education, and ensuring the delivery of content that meets the needs of the healthcare community.

We are excited to receive your proposed course applications and look forward to reviewing them. If you have any questions or concerns, please do not hesitate to contact us.

You can learn more about ISUOG’s mission and vision, as well as the requirements for approval, on our approved course platform. We are committed to providing high-quality education to healthcare professionals.
